

Welcome to the **"Future Classic"** soundset for legendary **Juno-106** synthesizer!

Among with classic sounds we really push boundries & limits of this lovely poly for unusual ambient, drone sounds among with rich poly timbres.

This sounds are working with only **real Juno-106, not emulations by Roland & Softube.**

To have a best experience with our sounds, first set your Bender like on picture:

You now able to tweak filter using bender – try it on every our preset.

Now its time for loading our sounds, you will need audio card, a jack cable.
Sounds will load into **GROUP B, so choose it first on the synth.**

INSTRUCTIONS

1. Connect a mono audio cable between the output of your computer/player and the LOAD input on the Juno-106
2. Set the tape so that the data starts from the beginning {where you hear pilot tone).
3. Set the Protect Switch on the rear panel to OFF.
4. Select either Bank **Group B** where you are to load the data, by pressing the Bank Group Selector Button.
5. Set the tape recorder to playback mode and press the Load Button.

* The Load Indicator lights up and the indication in the Display Window will go out. And loading will start.
* Be sure to press the Load Button before the Pilot tone turns to Modulated tone.
* Press the Manual Button to stop loading in the middle.

6. If loading is completed, set the Memory Protect Switch to ON, and stop the tape recorder.

* If error is indicated, carefully repeat Load procedure.
